

Systems & Access Register

Core platforms, ownership, administrator access, recovery, and business continuity

PREPARED FOR

Elliott Miller and Ben Conklin

Systems & Access Register

Core platforms, ownership, administrator access, recovery, and business continuity

PREPARED FOR	Elliott Miller and Ben Conklin
AS OF	September 14, 2026
SCOPE	Core company platforms and architectural integrations only
CLASSIFICATION	Internal operational governance - no credentials or secrets

01 — Purpose and Governance Standard

This register is intentionally limited to the primary company platforms and architectural integrations required to own, operate, recover, and launch Drywall Toolbox. It is not a WordPress plugin inventory, marketing-technology inventory, or credential store.

- Use named individual accounts for privileged access; do not share passwords.
- Require MFA for owners/administrators wherever supported and keep recovery methods under company control.
- Maintain at least two appropriately authorized people for business-critical platforms where the provider permits it.
- Do not record passwords, API keys, private keys, database credentials, recovery codes, payment data, or tokens in this document.
- Provider-level access is marked VERIFIED only when directly confirmed; application integration alone is not proof of account ownership.

02 — Core DTB Architecture

Current architectural contract: React storefront -> WordPress/WooCommerce -> DTB MU Plugins -> Action Scheduler -> Veeqo / QuickBooks / notifications. WooCommerce is the commerce system of record; Veeqo owns inventory and fulfillment; QuickBooks owns accounting projection; payment providers own sensitive payment processing. SiteGround hosts production.

03 — Core Systems & Access Register

Access state reflects the company access review current as of September 14, 2026. QuickBooks Online is the only outstanding core-platform setup item.

PLATFORM	AUTHORITY / PURPOSE	BEN ACCESS	REQUIRED CLOSURE
HostGator - Domain & DNS	Domain registration and authoritative DNS for drywalltoolbox.com	VERIFIED - Ben has access	Maintain company ownership, Ben owner/admin access, MFA, recovery, auto-renew, domain lock, billing, and DNS-change authority.
SiteGround	Production hosting, server/site tools, database, SSL and host backups	VERIFIED - Ben has access	Maintain Ben administrator/owner-equivalent access, MFA, billing/recovery, database/site-tools access, backup/restore access, and support recovery process.
WordPress / WooCommerce	CMS, product/customer/order administration, checkout and commerce persistence	VERIFIED - Ben has Administrator access	Maintain named administrator accounts and defined order, refund, catalog, and production-change permissions. WooCommerce remains commerce authority.
Stripe / Payment Account	Payment collection, authentication, payouts, disputes and payment-provider lifecycle	VERIFIED - Ben has access	Maintain company ownership, Ben appropriate administrator access, MFA, payout/bank ownership, live/test separation, webhook ownership, dispute/refund permissions, and recovery.
Veeqo	Inventory, allocation, fulfillment, shipping and tracking authority	VERIFIED - Ben has access	Maintain Ben appropriate admin/operations access, warehouse/channel ownership, carrier access, API/webhook ownership, and escalation path.
QuickBooks Online / Intuit	Accounting projection, reconciliation and financial records	ACTION REQUIRED	Ben needs to officially create and set up QuickBooks Online for company. After setup, confirm company ownership, MFA/recovery, accounting roles, and the DTB connection required for accounting projection.
Business Email	Company communications and recovery channel for critical services	VERIFIED - Ben has access	Maintain provider/tenant ownership, Ben admin or appropriate management access, MFA, recovery, shared-mailbox ownership, and offboarding procedure.

04 — Infrastructure Included Under the Primary Platforms

The following are governed under the primary platform that owns them and do not need separate governance rows unless responsibility later becomes materially different:

- Production database - governed through SiteGround and WordPress/WooCommerce operational controls.
- Production and disaster-recovery backups - governed through SiteGround plus any approved independent backup mechanism; restore capability must be tested.
- SSL/TLS and hosting security controls - governed through SiteGround and the application security architecture.
- Action Scheduler queues and DTB MU plugins - application components inside the WordPress/WooCommerce architecture, not separate third-party ownership accounts.
- Forms, repairs, returns, schematics, support tooling and catalog tooling - DTB application domains, not standalone governance platforms unless an external provider is introduced.

05 — Access Closure Checklist

- Maintain Ben's verified named access to each core platform and review role assignments periodically.
- Maintain company-controlled recovery paths and eliminate single-person lockout risk for each core platform.
- Enable MFA and verify recovery methods for every privileged account.
- Confirm company-controlled billing and renewal contacts for HostGator, SiteGround and other subscription platforms.
- Document who may make destructive changes: domain/DNS changes, production hosting changes, refunds/payout changes, and accounting-administration changes.
- Document offboarding: revoke access, transfer ownership, rotate shared/service credentials, preserve logs, and verify recovery.

QUICKBOOKS ONLINE - ACTION REQUIRED

Ben needs to officially create and set up QuickBooks Online for company.

06 — Sign-Off Register

The register records the confirmed access state for the core architectural platforms. QuickBooks Online remains pending company setup.

SYSTEM	STATUS	CONFIRMATION	DATE
HostGator domain/DNS	VERIFIED - Ben has access	User-confirmed	September 14, 2026
SiteGround	VERIFIED - Ben has access	User-confirmed	September 14, 2026
WordPress / WooCommerce	VERIFIED - Ben has access	User-confirmed	September 14, 2026
Stripe	VERIFIED - Ben has access	User-confirmed	September 14, 2026
Veeqo	VERIFIED - Ben has access	User-confirmed	September 14, 2026
Business email	VERIFIED - Ben has access	User-confirmed	September 14, 2026
Backup / restore capability	VERIFIED under SiteGround access	User-confirmed	September 14, 2026
QuickBooks Online	ACTION REQUIRED	-	-

07 — Governance Completion Standard

This register is operationally complete when each core platform has a confirmed company owner, named privileged users, MFA/recovery controls, and an assigned primary/backup operator. QuickBooks Online remains the sole outstanding platform setup item in this version.

Google analytics/marketing properties and individual WordPress plugins are intentionally outside this version.
